

SENTRIGUARD® FOR SECURITY SERVICES

Revolutionise your keyholding and improve alarm response times

SentriGuard® is a unique key management solution that enables approved users to access keys quickly by storing them at the point of need.

It provides a secure alternative to traditional keyholding and is trusted by leading security companies across the UK and Europe.

FASTER RESPONSE TIMES

With keys securely stored on-site, the nearest patrol can respond to call-outs much quicker. Eliminate delays caused by traditional keyholding processes.

COMPLETE ACCESS CONTROL

Grant and revoke access remotely and view the access audit trail on the platform. The key detection feature will notify you if keys are not returned.

NO MORE KEY LOCKERS

A secure alternative to traditional keyholding. Simplify key auditing, eradicate the need for key lockers and complex keyholding logistics.

REDUCED CO₂ EMISSIONS

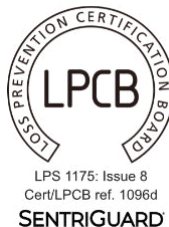

With keys stored in SentriGuard, lighter and less polluting transport can replace reinforced keyholding vans for patrols.
