IT'S TIME FOR A
CHANGE

SentriGuard® can help you transform your keyholding in a smart, secure and cost-effective way

Let us introduce SentriGuard, a unique access control system that can benefit your business in many ways: commercially, operationally and even environmentally!

For decades, property access management using traditional keyholding methods has identified issues on a number of levels. Some example of these are slower response times by security providers, who need to locate specific keys, as well as wasted journey time for contractors travelling to a central location to collect and return keys.

With SentriGuard, keys are stored in the most secure key safe in the UK at the point of entry. All access is managed remotely on a bespoke cloud-based platform, and assigned users can access keys with either a mobile app or a flexible code, issued for entry within a selected time frame.

This brochure will explain more about SentriGuard**,** its benefits, accreditations and features. However, if you still have any questions or would like a demo, get in touch and our team will be happy to help!

NEW WAYS OF
KEYHOLDING

SentriGuard has revolutionised keyholding operations for numerous top-tier companies across the USA, the UK, and Europe. No matter the sector, our customers consistently experience significant benefits after deploying our solutions.

BENEFITS

Unrivalled security

Faster alarm response

Complete audit trail

Quick access for contractors

Offers cost savings

Eradicates key loss

Operational time savings

A step closer to Net Zero

SECTORS

Security services

Facilities management

Banking

Healthcare

Construction

SENTRIGUARD®
EXPLAINED

SentriGuard is a smart key management solution, distinguished by its unmatched features. It comprises three key elements: a commercially graded key safe, an access management platform, and an app for opening allocated key safes. Learn more about each on the following pages.
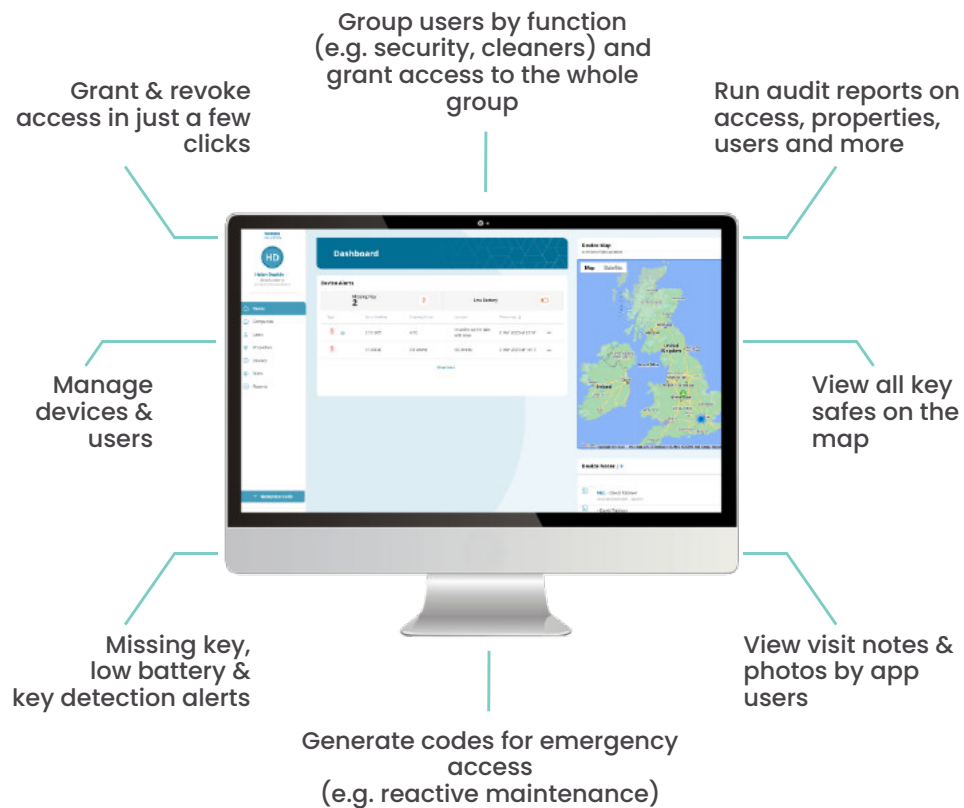

Access data, visit notes & photos are available on the platform in real time

A device is installed & linked to a particular property; access is granted to specific users

A key safe is opened by assigned users with the app via Bluetooth

ACCESS+ PLATFORM
Manage properties, devices, users and their access remotely

SENTRIGUARD KEY SAFE
Store keys securely at the point of need

ACCESS+ MOBILE APP
Open assigned key safes without the need for access codes

KEYNETICS
The Key Management Revolution

SENTRIGUARD®
KEY SAFE

Key detection feature

Bluetooth connectivity

Certified commercial grade security

In-built backup battery

App or code access

Battery life of up to 8,500 cycles

Large key compartment

Operating temperatures: -30°C to +55°C

Weatherproof design

Redeployable at a different location

Attach to a substrate with the hasp or the bracket

SENTRIGUARD®

SENTRIKEYACCESS+
PLATFORM

Group users by function (e.g. security, cleaners) and grant access to the whole group

Grant & revoke access in just a few clicks

Run audit reports on access, properties, users and more

Manage devices & users

View all key safes on the map

Missing key, low battery & key detection alerts

View visit notes & photos by app users

Generate codes for emergency access (e.g. reactive maintenance)

SENTRIKEYACCESS+
MOBILE APP

Open allocated key safes

No need for access codes

Add visit notes and photos

Nearby key safe locator on the map

User-friendly with an intuitive interface

Notes from previous visits by all users

Access can be quickly revoked via the platform

On screen alert if keys are not returned

View your access permissions to each key safe (by time or day of the week)
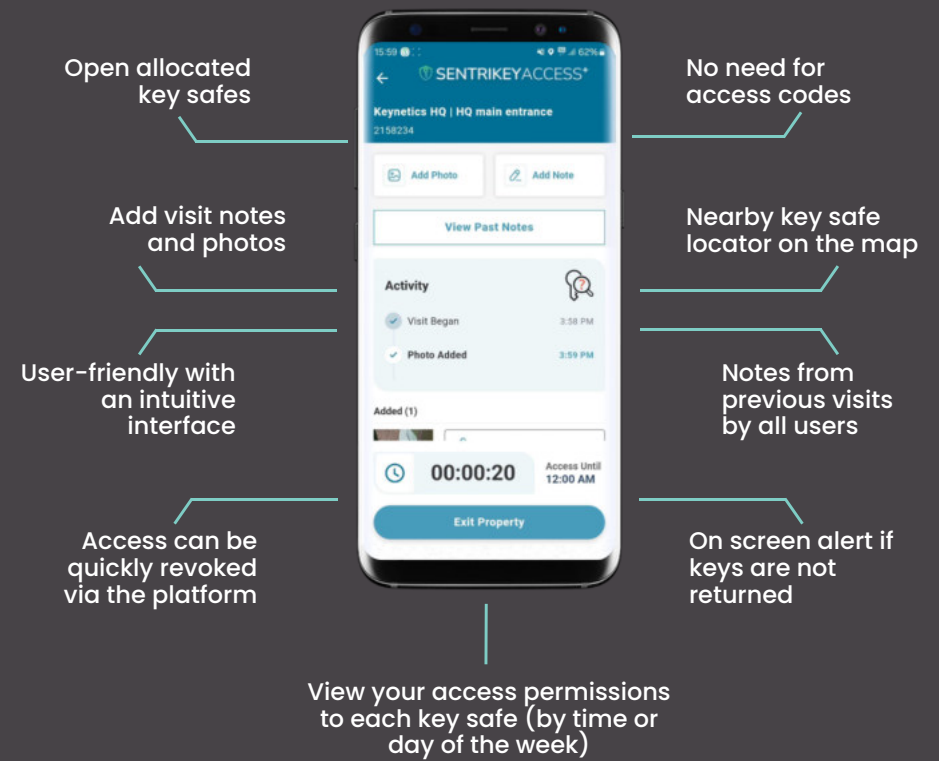

SENTRIGUARD®

KEY DETECTION FEATURE

RECEIVE ALERTS WHEN KEYS ARE NOT RETURNED

SentriGuard is the only key safe on the market that offers real-time key detection and can issue automated text or email alerts when keys are not detected in a key safe after a visit.

The last key safe user can be quickly traced using the Access+ platform and contacted for a status update.

We give you full control over access to your properties, eliminating delays, missing keys, and costly lock replacements.

UNRIVALLED
SECURITY

Attack tested and certified by LPCB and Secured by Design, SentriGuard® is the top-choice key safe, offering security levels unmatched by any alternative solution

But we don't stop there! At Keynetics, our key safes undergo continuous development and rigorous testing to ensure you always have the most secure solution on the market.

LPS 1175
(C1 & C3 GRADED)

LPS 1175 is a standard by the Loss Prevention Certification Board (LPCB), which evaluates physical security products, their design, manufacture, and the actual resistance to unauthorised access. It is a must-have certification that is often requested by insurance providers.

In order to obtain this certification, Keynetics had to follow a strict procedure, which included product attack-testing and design evaluation, plus a factory production control (FPC) audit.

LPS 1175: Issue 8
Cert/LPCB ref. 1096d

SENTRIGUARD®
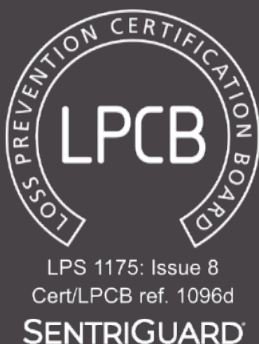

LPS 1175
SECURITY RATINGS EXPLAINED

Letter C = tool category
A = light duty, e.g. a screwdriver
B = heavier duty, incl. 6V drill
C = tools incl. crowbar and 12V drill

Number = time of the uninterrupted attack
in minutes during the attack tests

SECURED BY DESIGN

SentriGuard key safes are also Secured by Design (SBD) certified through their Police Preferred Specification scheme.

Created in 1989, SBD is the official police initiative, focused on improving the physical security of buildings and the surrounding areas, and reducing crime.

DIGITAL SECURITY

It's not just about physical security! As a software provider, we are continuously focused on ensuring that the digital data of our partners, clients and users is protected and processed in compliance with industry best practices.

We have various of processes in place to ensure that strong cyber defences are in place and that data backups comply with the Data Protection rules and GDPR.

CYBER ESSENTIALS CERTIFIED

THE ONLY COMMERCIAL GRADE KEY SAFES

CUSTOMER
TESTIMONIALS

Learn how Keynetics' key management systems have transformed alarm response and FM service delivery for clients across different sectors.

Over the years, we have collected countless testimonials from customers who have benefited from deploying our smart solutions. Here are just a few, gathered from clients across various sectors. Each had a unique reason for changing the way they manage keys, but all reported remarkable improvements after storing keys at the point of need in our secure key management system.

60%

QUICKER ALARM RESPONSE TIME
BANKING

With hundreds of branches across the country and strict security requirements, our banking client successfully reduced the average alarm response time from up to two hours to just 45 minutes across all locations.

This improvement was achieved through a simple yet effective change: by storing keys at the point of need, the nearest patrol (rather than a designated keyholding unit) could respond to call-outs more efficiently.

Undoubtedly, security is a top priority in banking, which is exactly why Keynetics' solutions were chosen for the task.

90%

REDUCTION IN MISSED VISIT CHARGES
FACILITIES MANAGEMENT

A facilities management client was managing over 2,000 locations that required regular third-party contractor visits. However, the smallest issue with contractor access resulted not only in missed visit charges but also delays and logistical visit scheduling challenges.

After deploying our system for the year, missed visits (and consequential charges) were reduced by 90%. In addition, every visit and completed job was logged on the system as proof of service delivery.

50%

LESS TRAVEL & CO_2 EMISSIONS
PUBLIC SECTOR

A simple task, such as the Lock-Unlock service provided by FM companies, can be time-consuming. It often requires additional travel for key collection, leading to unnecessary carbon emissions depending on the transport.

In a recent project, Keynetics helped a client cut travel and emissions simply by using our key safes to store keys at the point of need.
